

Memo

To: Papa John's Pizza File
From: Bob Corson
Date: June 18, 2001
Subject: Odor Complaint

On June 13, 2001, I responded to an odor complaint at the Papa John's Pizza located at 1814 W. Kearney. When I arrived at 3:00 pm personnel from the City Utilities gas department were already on site. The CU gas technician met me in the parking lot and said that he had found detectable amounts of CO in the building but had not located the source.

Using my Drager gas detector I checked the atmosphere in the building. When I first entered the building the meter indicated 37 ppm of CO. I also noticed a petroleum odor. As we proceeded into the building the CO readings dropped to 0. We checked floor drains and plumbing fixtures but the readings remained 0. As we were checking around the pizza oven the CU technician observed CO readings with his meter as high as 80 ppm. The CU technician felt that there is a problem with the burners in the pizza oven. He advised the store manager of his findings and told her she should have someone look at the oven. She said that she would call her manager about our findings.

I also checked the City sanitary sewer for odors. Manhole 25, Wye Map M17 NE is the first down stream manhole. I got 0 readings for CO, H₂S, and LEL. The O₂ reading was 20.9
